

**Listing Of The Claims:**

Please amend the claims as follows:

1. (currently amended) A method of displaying information from a handheld electronic device on a video screen remote from the handheld electronic device, the method comprising:

receiving information from the handheld electronic device over a wireless coupling;  
responsive to receiving the information from the handheld electronic device,  
generating a video signal corresponding to the information from the handheld electronic device; and

providing the generated video signal to the video screen for display of the information on the video screen; ~~sereen~~

wherein receiving information from the handheld electronic device is preceded by determining if information is being transmitted from the handheld electronic device;

wherein the operations of receiving the information from the handheld electronic device, generating the video signal, and providing the video signal to the video screen are performed responsive to determining that information is being transmitted from the handheld electronic device; and

wherein the method further comprises providing an alternate video to the video screen responsive to determining that information is not being transmitted from the handheld electronic device.

2. (original) A method according to Claim 1 wherein the information from the handheld electronic device comprises at least one selected from the group consisting of an e-mail received by the handheld electronic device, a game screen for a game being played on the handheld electronic device, an internet page received by the handheld electronic device, a photograph, and a video clip.

3. (original) A method according to Claim 1 wherein receiving the information from

the handheld electronic device comprises receiving the information according to a Bluetooth wireless protocol.

4. (original) A method according to Claim 1 wherein the video signal further comprises at least one selected from the group consisting of a horizontal line sync pulse, a color reference burst, a reference black level, picture luminance information, color saturation information, color hue information, and a vertical sync pulse.

5. (original) A method according to Claim 1 wherein the handheld electronic device comprises a radiotelephone.

6. (original) A method according to Claim 1 wherein the handheld electronic device comprises a personal digital assistant.

7. (canceled).

8. (original) A method according to Claim 1 wherein the video screen comprises a television.

9. (original) A method according to Claim 1 wherein the handheld electronic device includes a local display mounted in a housing of the handheld electronic device and wherein the local display is small relative to the remote video screen.

10. (currently amended) ~~A method according to Claim 9 further comprising:~~ A method of displaying information from a handheld electronic device on a video screen remote from the handheld electronic device, wherein the handheld electronic device includes a local display mounted in a housing of the handheld electronic device and wherein the local display is small relative to the remote video screen, the method comprising:  
receiving information from the handheld electronic device over a wireless coupling;

responsive to receiving the information from the handheld electronic device,  
generating a video signal corresponding to the information from the handheld electronic  
device; and

providing the generated video signal to the video screen for display of the information  
on the video screen; and

showing the information on the local display of the handheld electronic device  
concurrently with showing the information on the remote video screen.

11. (currently amended) A video signal generator comprising:  
a receiver configured to receive information from a handheld electronic device over a  
wireless coupling;

a processor configured to generate a video signal corresponding to the information  
from the handheld electronic device responsive to receiving the information from the  
handheld electronic device; and

a video output configured to provide the video signal to a video screen for display on  
the video screen wherein the video output is further configured to provide an alternate video  
signal to the video screen if information is not being received from the handheld electronic  
device.

12. (original) A video signal generator according to Claim 11 wherein the receiver is  
configured to receive the information according to a Bluetooth wireless protocol.

13. (original) A video signal generator according to Claim 11 wherein the video  
signal further comprises at least one signal selected from the group consisting of a horizontal  
line sync pulse, a color reference burst, a reference black level, picture luminance  
information, color saturation information, color hue information, and a vertical sync pulse.

14. (original) A video signal generator according to Claim 11 wherein the handheld  
electronic device comprises at least one of a radiotelephone and a personal digital assistant.

15. (canceled).

16. (currently amended) A method of displaying information from a handheld electronic device on a video screen remote from the handheld electronic device, the method comprising:

generating information within the handheld electronic device wherein the generated information is adapted for display on a local display of the handheld electronic device; and

determining at the handheld electronic device that the receiver is within a transmission range of the handheld electronic device;

responsive to a determination that the receiver is within range, transmitting the generated information from the handheld electronic device over a wireless coupling to a receiver for display on the remote video screen remote; and

displaying the information on the display of the handheld electronic device responsive to a determination that no receiver is within range of the handheld electronic device.

17. (currently amended) ~~A method according to Claim 16 further comprising:~~ A method of displaying information from a handheld electronic device on a video screen remote from the handheld electronic device, the method comprising:

generating information within the handheld electronic device wherein the generated information is adapted for display on a local display of the handheld electronic device;

transmitting the generated information from the handheld electronic device over a wireless coupling to a receiver for display on the remote video screen remote; and

displaying the information on the local display of the handheld electronic device concurrently with transmitting the information from the handheld electronic device over the wireless coupling.

18. (canceled).

19. (original) A method according to Claim 16 wherein the information from the handheld electronic device comprises at least one selected from the group consisting of an e-mail received by the handheld electronic device, a game screen for a game being played on the handheld electronic device, an internet page received by the handheld electronic device, a photograph, and a video clip.

20. (original) A method according to Claim 16 wherein transmitting the information from the handheld electronic device comprises transmitting the information according to a Bluetooth wireless protocol.

21. (original) A method according to Claim 16 wherein the handheld electronic device comprises at least one selected from the group consisting of a radiotelephone and a personal digital assistant.

22. (original) A method according to Claim 16 wherein the video screen comprises a television.

23. (original) A method according to Claim 16 wherein the display of the handheld electronic device is small relative to the video screen.

24. (currently amended) A handheld electronic device comprising:  
a local display mounted on a housing of the ~~display device~~;  
a processor coupled to the display wherein the processor is configured to generate information within the handheld electronic device wherein the information is adapted for display on the local display of the handheld electronic device; and  
a transceiver coupled to the processor wherein the transceiver is configured to transmit the generated information from the handheld electronic device over a wireless coupling to a receiver for display on a video screen remote from the handheld electronic ~~device device~~;

wherein the processor is further configured to determine whether a receiver of a video

screen is within a transmission range of the handheld electronic device, to initiate transmitting the generated information from the transceiver over the wireless coupling to a receiver for display on the remote video screen responsive to a determination that a receiver of a video screen is within transmission range, and to display the information on the local display responsive to a determination that a receiver of a video screen is not within transmission range.

25. (currently amended) ~~A handheld electronic device according to Claim 24~~ A handheld electronic device comprising:

a local display mounted on a housing of the device;

a processor coupled to the display wherein the processor is configured to generate information within the handheld electronic device wherein the information is adapted for display on the local display of the handheld electronic device; and

a transceiver coupled to the processor wherein the transceiver is configured to transmit the generated information from the handheld electronic device over a wireless coupling to a receiver for display on a video screen remote from the handheld electronic device;

wherein the information is shown on the local display of the handheld electronic device concurrently with transmitting the information from the handheld electronic device over the wireless coupling.

26. (original) A handheld electronic device according to Claim 24 wherein the processor displays the information on the local display of the handheld electronic device when no receiver is within range of the handheld electronic device.

27. (original) A handheld electronic device according to Claim 24 wherein the transceiver transmits the information from the handheld electronic device according to a Bluetooth wireless protocol.

28. (original) A handheld electronic device according to Claim 24 wherein the handheld electronic device comprises at least one selected from the group consisting of a radiotelephone and a personal digital assistant.

29. (original) A handheld electronic device according to Claim 24 wherein the local display of the handheld electronic device is small relative to the video screen.

30. (canceled).

31. (canceled).

32. (canceled).

33. (canceled).

34. (canceled).

35. (canceled).

36. (canceled).

37. (previously presented) A method according to Claim 1 wherein the information is configured for display on a local display of the handheld electronic device.
